

DYNAMIC SUPPLY CHAIN RESPONSE

COMMAND CENTERS

For Supply Chain leaders, command center approach offers dynamic solutions that create tight links between planning and execution. The command center replaces static systems with active demand management providing connectivity, deep analytics and prescriptive actions across the entire demand curve at every level of granularity.

DIGITAL NETWORKS

Digital supply networks (DSNs), ensure functional silos are broken down and organizations enable end-to-end visibility, collaboration, agility, and optimization. Organizations that deploy DSNs will be better prepared to deal with any number of unexpected events, whether a pandemic, trade dispute, regulatory change, labor stoppage, sudden spike in demand, or supplier instability.

CONNECTED PLANNING

By consolidating siloed planning into one platform, businesses can execute the same tasks more quickly, freeing up time for value added activities. A connected planning approach provides fast access to meaningful data, making it possible to discover trends and patterns in a quickly changing world to make informed decisions.

Today's supply chain professionals face a variety of fresh challenges related to a volatile and uncertain global marketplace, making demand management more complex and urgent.

Scanomi Solution Package

- ✓ Anaplan Implementation.
- ✓ 10 Users, 44 GB.
- ✓ Integration with Underlying System.
- ✓ Agile Co-build with Training.
- ✓ Configuration & Training in 90 days.
- ✓ Solution Ready for Use in 60 days.

About Us

Local Consultant with Anaplan Expertise | Faster Response Times | Agility of a Start-up | Customer Focused & Highly Experienced Team | Anaplan Solutions with New Product Releases Every Quarter | Training in Anaplan Fundamental, Intermediate & Advanced Topics | Best & Latest Practices around Business Planning Processes for your Organization | Experience in implementation of Anaplan Use Cases in Sales, Finance, S&OP, HR, Marketing & IT | Extensive APAC Implementation Experience
