

# On-Demand Forecasting

*A SCANQMI INITIATIVE TO MAKE  
PREDICTIVE FORECASTING  
ACCURATE & ACCESSIBLE TO  
EVERY BUSINESS.*

SCANQMI

## WHY FORECASTING

Accurate Business Forecasting is critical because it provides the ability & agility to make informed business decisions and develop data-driven strategies. Supply Chain, Finance, Sales, Workforce and Operations are high-impact business use cases that forecasting addresses.

The application of forecasting in business is an art and a science; the combination of business intelligence and data science. Historically, forecasting has not been an exact science. But our innovative predictive forecasting solutions use highly sophisticated algorithms and qualitative & quantitative statistical methods that activate a range of techniques and data analysis to generate detailed, accurate and justifiable forecasting reports.

## ON-DEMAND FORECASTING

Business Forecasting has traditionally been messy, siloed, complex & inaccurate; largely due to legacy systems not delivering on their tall claims. Add to it the high cost of infrastructure & maintenance, and you have a forecasting system that is bound to fail.

Scanomi conducted independent surveys, collected feedback, & analyzed challenges with existing forecasting systems to arrive at a well-researched, scientific On-demand Predictive Forecasting solution that not only addresses the challenges with forecasting itself, but also ensures that you don't break the bank to accurately forecast for your business. With the revolutionary On-demand Forecasting, every business, small or big, can now have access to accurate forecasting, connected planning & intelligent decision making.

<b>INSTANT BENEFITS</b>	<b>YOUR SUCCESS IN MIND</b>
